KPA EtherCAT Slave Stack 2 Editions

KPA EtherCAT Slave Stack 2 is available as a set of ready-to-use integration packages — pre-integrated, validated, and optimized for specific operating systems and hardware platforms. Each package enables faster evaluation and a shorter path to market, providing a stable and ETG-compliant implementation of the EtherCAT protocol.

Each integration package of KPA EtherCAT Slave Stack 2 is available in three editions — from free evaluation to full-featured professional deployment:

- **Evaluation** (Trial)
  Try it free
  Restricted, time-limited edition running in 1-hour sessions for first assessment and quick evaluation.

- **Consumer**
  Prototype with confidence
  Restricted, perpetual, non-production edition with core features (CoE Mailbox, Static Object Dictionary, Interrupt Service Routines (ISR)) for testing integration and performance before moving to production.

- **Professional**
  Deploy to market
  Full source code tailored to OS and hardware, full-featured, access to updates and long-term support.
