

KPA Automation: Cost-effective SCADA platform

KPA Automation is a cost-effective and vendor-independent software platform for factory automation and process control applications. It enables system integrators, solution providers and automation specialists to design, implement and support PC-based industrial automation systems of any level and scale – from a lightweight software PLC to a full-fledged integrated SCADA system.

Key features

- Powerful and scalable software platform for industrial automation solutions
- Unlimited customization and programming possibilities
- EtherCAT, OPC and Modbus support for integration with third-party equipment and systems
- 20 years of successful development, hundreds of installations around the world
- Complies with CFR 21 Part 11 requirements^[*]

*For more details on *CFR 21 Part 11* compliance, refer to *KPA Automation CFR 21 Part 11 Compliance Note*.

KPA Automation Studio

- Object-oriented approach
- Embedded helper objects
- Vector graphic editor
- Permissions and user management
- Dictionary editor and manager
- Import and export

KPA Automation View

- Unlimited data tags
- Unlimited screens and windows
- Fully programmable visualization
- Extensible library of visual controls
- Unlimited UI languages
- Communication with native or third-party PLCs using OPC or Modbus protocol

KPA Automation softPLC

- Supports 5 programming languages
- Comply to IEC 61131
- Integration with EtherCAT and Motion control
- OPC UA, MODBUS, Shared Memory
- Meets requirements of PLCopen
