

KPA Automation View: Advanced Visualization Solution

KPA Automation View is a comprehensive software solution for creating advanced Human Machine Interfaces (HMI) for factory automation and production control. It is a powerful, highly-customizable, fully-programmable environment with truly unlimited possibilities for designing and programming even the most sophisticated applications with any desired appearance, logic and connectivity.

Key features

- Unlimited data tags, screens and windows
- Supports third-party PLCs through OPC Classic, Modbus TCP/IP or custom TCP-based protocol
- Advanced features: data storage and export, reporting, trends and charts and other
- User access control and logging
- Suitable for CFR 21 Part 11 compliant systems

The delivered package of KPA Automation View includes **KPA Automation Studio** – integrated development environment with user-friendly drag-and-drop user interface for programming appearance and behavior of HMI controls.

The result of the KPA Automation Studio development is a project running in KPA Automation View.

KPA Automation Studio provides the following features for creation of process control visualization projects adapted to the needs of a customer:

- Visualization Library that includes vector graphics editor, script code editor, property and event browsers, wizards, and so on
- Security Editor used for user management and permission control
- Dictionary Editor for managing project strings translation that are displayed in HMI
- Engineering Units Editor that helps to manage engineering units

For ease and convenience of development, KPA Automation Studio offers:

- Object-oriented approach to all components
- Scintilla-based code editors
- Code completion and syntax checking
- JavaScript support for client-side scripting
- Ready-to-use libraries with convenient library management
